

The LittleTipper™

Trailer Mounted Dewatering Container

The LittleTipper™ provides an economical method for dewatering small amounts of sludge and transporting the de-watered cake in the same container to the disposal site, thus eliminating double handling of sludge and cake. The unit can be used to dewater a large variety of sludges, slurries, and waste streams. The material is either pumped or conveyed into the hopper. Filter media installed in the hopper separates the solids from the liquid which exits the hopper via drainage ports. With the addition of an extended platform on the trailer, a polymer mixing and injection system can be added.

► Features

- Self-Dumping
- Towable over the road
- Heavy duty construction
- One person operation
- 7 gauge body with ¼" thick base
- Standard sizes: 1 yd, 1.5 yd, 2 yd, & 3 yd
- Optional tandem axles
- Optional electric brakes
- Optional battery powered winch
- Dump hopper sizes: 3,4, and 5 cubic yards

► Applications

- Grit & Screenings Dewatering
- Dewatering Discharges from Grit Classifiers & Hydrocyclones (As Well As Other Grit Separation Devices)
- Bio Solids Dewatering
- Water Plant Debris
- Sump Water
- Catch Basin Waste

► Available For

The AquaCat is suitable for flocculated sludge

The GritCat is used on gritty, sandy waste streams

The GeoCat is suitable for difficult to handle sludge

► How It Works

This trailer mounted dewatering container is ideal for dewatering small amounts of sludge. The unit can accommodate all three types of ParkProcess dump hoppers. The LittleTipper™ eliminates doubling handling of sludge and sludge cake, providing the means for dewatering and transporting to the disposal location. The LittleTipper hooks to a ball type hitch for transport to the dumping site. The load is dumped easily by lifting the EZ Release handle upward. A constant brake hand winch allows the operator to control the flow of the material during the dumping process and to return the hopper to its upright locked position. A pivoting, hand crank style jack stand is positioned on the hitching frame to allow the trailer to free stand.

► Options

- Various Types Of Lids
- Electric Brakes
- Tandem Axles
- Special Paint
- Polymer Platform
